DATA MANAGEMENT STUDIO

Simplify enterprise data engineering with AI

Large enterprises with multiple cloud vendors and databases generate massive volumes of data every day. Some of this data is structured, some are unstructured, and nearly all of it is scattered across the organization. This creates numerous silos.

For those using many point solutions to manage this data complexity, Subex has designed a single solution with an all-in-one offering. Data Management Studio is a no-code solution that manages, views, and discovers complex enterprise data, pooling it into a single source of truth. It also captures data-related actions like annotations, cataloging, and lineage, providing enterprises with a 360-degree view of all the business data in one place.

FEATURES

Multiple Data Formats

Supports multiple data formats including ASCII data, binary data, ASN.1 data, and JSON data.

Streaming Data

Enables batch and real-time data ingestion across multiple data formats.

ETL/ELT Transformation

Allows ETL/ELT transformation of the input data into one or more data lakes.

Integrate data from multiple sources

Ingest, integrate, and transform data from multiple data sources to create a robust data pipeline while ensuring the right data goes to the right place in real-time.

Quick data storage and cataloging

Easily store, catalog, and find data for business consumption.

BENEFITS

Simplify data discovery, get quicker insights and reduce TCO.

Real-time visibility into data for rapid, profitable decision-making.

Innovate and scale business growth with unified access to all data needs in one place.

Eliminate the need for multiple point solution and provide a single source of truth to make better decisions.

Reduce data preparation time and boost data engineer efficiency and productivity.
